

# 255 photovoltaic panel open circuit voltage

## Overview

---

To be more accurate, a typical open circuit voltage of a solar cell is 0.58 volts (at 77°F or 25°C). All the PV cells in all solar panels have the same 0. This sounds a bit weird, but it's really not. How many of this panel are you wiring in series?

(If you're wiring different solar panels together, use the "Add a Panel" button below. Hello Zornes\_2556, The open-circuit voltage (Voc) of a solar panel is the maximum voltage the panel can produce when there is no load connected, meaning the terminals are not connected to anything. Solar energy is an incredible source of renewable power, and many of us are familiar with the basics of solar panel systems.
