

# Accidental exhaust of gas generator room

## Overview

---

Install proper ventilation ducts and a high-quality exhaust fan to vent a generator in a garage. Ensure the exhaust system directs fumes outside. Generators produce harmful fumes, including carbon monoxide, which can be deadly. Below, we'll explore what a generator ventilation system does, the NFPA 110 requirements for such systems, and what tasks are involved in ensuring compliance. The second option is to connect the generator's exhaust to a PVC vent pipe outside that discharges the fumes into the. The use of gas fired, and diesel fueled generators for back-up power and co-generation is increasing due to a higher demand on the current electrical infrastructure, the growing need for backup power and the necessity to improve overall efficiency to ensure uninterrupted power. Exhaust gases must be piped safely away from any room or enclosure that houses a generator and to a well ventilated.
