

# Advantages of liquid-cooled energy storage in Malawi

## Overview

---

The liquid cooling system supports high-temperature liquid supply at 40–55°C, paired with high-efficiency variable-frequency compressors, resulting in lower energy consumption under the same cooling conditions and further reducing overall operational costs. It improves efficiency and increases safety. Continued research and innovation in liquid cooling systems will further optimize battery storage systems, providing more efficient and reliable solutions with significant performance improvements for BESS. Short heat dissipation path, precise temperature control. Liquid-cooled. Advantages of Liquid Cooling Superior Thermal Management: Liquids have a thermal conductivity up to 25 times higher than air, enabling rapid heat dissipation. This is critical for large-scale ESS with high energy density, where air cooling struggles to prevent hotspots. Improved longevity of components, 3.
