

Anengbao Solar Power Generation

Overview

Abengoa Solar is a global solar power generation company that offers proven proprietary technologies (CSP & PV), innovating in the development of solar technology and, developing and operating solar plants. The Solana Generating Station is a solar power plant near Gila Bend, Arizona, about 70 miles (110 km) southwest of Phoenix. solar plant with molten salt thermal energy storage. B), the international company that applies innovative technology solutions for sustainability in the energy and environment sectors, has announced that Solana, the world's largest parabolic trough plant with a total installed capacity of 280 MW (gross) and also the first solar. The 280-MW Solana Generating Station combines concentrating solar power (trough) technology with thermal energy storage, which allows the plant to operate after the sun goes down with up to a 38% annual average capacity factor. The \$2 billion project began generating electricity in October 2013. Abengoa planned to operate the plant at full load for 6,400 hours each year.

Anengbao Solar Power Generation

[Top Plant: Solana Generating Station, Maricopa County, Arizona](#)

Abengoa is able to dispatch its generation by integrating its proprietary parabolic-trough concentrating solar power (CSP) technology with thermal energy storage.

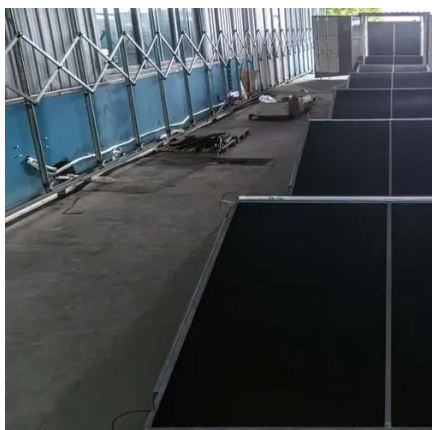

[Abengoa Solar's Solana plant in Arizona uses thermal storage to keep](#)

Abengoa announced on Wednesday that the Solana plant "passed commercial operation tests." The first of these involved running the plant's generator at full power while also ramping up the ...

[Project Profile: Advanced Nitrate Salt Central Receiver Power Plant](#)

Abengoa planned to operate the plant at full load for 6,400 hours each year using only solar energy. The team worked to create a team of suppliers capable of deploying a commercially ready nitrate salt ...

Abengoa :: News

Abengoa currently has 1,223 MW of concentrating solar power in operation and 430 MW under construction. It is the largest CSP company in the world and one of the few that constructs and ...

Engineering: Solana Generating Station

The plant employs a proprietary concentrating solar power (CSP) trough technology developed by Abengoa, and covers an area of 1,920 acres (780 ha). Construction was expected to create about ...
