

Armenian wind power system

Overview

Wind power generates less than 1% of Armenia's electricity annually, [1] as there were only four wind farms in 2023 [2] and less than 10 MW is installed. [3] According to a study sponsored by the United States Department of Energy (DOE) and the United States Agency for International Development. Forming the foundation of Armenia's renewable energy system as of 6 January 2022 were 189 small, private HPPs (under 30 MW), mostly constructed since 2007. Installed capacity is approximately 389 MW for annual generation of 943 GWh, covering 14% of domestic supply. Several small plants also produce. In 2003, the Wind Energy Resource Atlas of Armenia was drawn. According to it, economically reasonable wind power potential is estimated at 450 MW total installed capacity and at electric power output of 1. High prospect areas include the mountain passes of Zod, Jajoor, Sevan.

Armenian wind power system

[Exploring the Untapped Potential of Wind Energy in Armenia's Energy](#)

Armenia's geographical location and topography provide favorable conditions for harnessing wind energy. The country is characterized by high mountains and plateaus, which create ...

Armenia - Asia Wind Energy Association

As of 2008, the Lori 1 Wind power plant is Armenia's only wind power plant. Completed in December 2005 by the Iranian company "Sunir" with funding from Iran, it consists of 4 wind turbines and has a ...

Wind Power

Wind Energy has significant potential and is one of the fastest growing sectors for energy production. Wind power energy in the Republic of Armenia has total capacity of 450 MW with annual output of ...

[Energy system transformation - Armenia energy profile](#)

As of 1 January 2020, wind energy implementation in Armenia was limited. In addition to already-operating wind farms with total installed capacity of 4.23 MW, only one more is under construction ...

Wind power in Armenia explained

Wind power in Armenia explained Wind power generates less than 1% of Armenia's electricity annually, [1] as there were only four wind farms in 2023 [2] and less than 10 MW is installed.

Wind power in Armenia

Wind power generates less than 1% of Armenia's electricity annually, as there were only four wind farms in 2023 and less than 10 MW is installed. According to a study sponsored by the United States Department of Energy (DOE) and the United States Agency for International Development (USAID) in 2002-2003, the theoretical wind power potential of Armenia is 4,900 MWe in four zones with a total area of 979 km . According to this r...

Global Wind Atlas

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind power generation virtually anywhere in the world, and then ...

Wind Energy

In December 2005, for the first time in Armenia and in the Caucasus a grid-connected wind-power plant with capacity of 2.6 MW was put into operation at Pushkin Pass. In the future it is foreseen to enlarge ...

Wind power in Armenia

The most promising areas for wind power plants are Zod pass, Bazum Mountain, Jajur pass, the territory of Geghama Mountains, Sevan Pass, Aparan, the highlands between Sisian and Goris, and the ...

[Armenia Plans to Build 500 MW Wind Power Plants by 2040](#)

The Armenian government has announced plans to construct wind power plants. It is part of a state-led initiative. By 2040, the country aims to achieve a total wind energy capacity of ...

Commercial wind power generation system in Armenia

Despite being a clean and inexhaustible source of power, wind energy remains largely untapped in Armenia. In 2020, the country's installed wind power capacity stood at a mere 7.6 MW,
