

BESS solution for commercial and industrial energy storage costs

Overview

For Commercial and industrial (C&I) businesses, a battery energy storage system (BESS) can help optimize energy costs, improve energy resilience, decarbonize their operations and accelerate electrification. A power outage can be catastrophic, with 98% of organizations reporting that a single hour of downtime costs over \$100,000. Businesses can charge the batteries during off-peak hours when electricity rates are lower and discharge the stored energy during peak demand times when rates are higher.
