## Overview

---

They consist of antennas, transceivers, controllers, and power supplies to transmit and receive signals. The present-day tele-space is incomplete without the base stations as these constitute an important part of the modern-day scheme of wireless communications. They are referred to as cell towers or cellular antennas. These types of objects are an inevitability since they serve the purpose of. Base stations are the foundational elements that make this connectivity possible, acting as fixed points that bridge the gap between a mobile device's radio signal and the global wired network. The process includes encoding user data, modulating it onto RF waves, transmitting via antenna arrays, receiving by.
