

Base station power supply AC system

Overview

A base station energy storage system is a compact, modular battery solution designed to ensure uninterrupted power supply for telecom base stations. It supports stable operations during grid outages or unstable conditions and enables energy optimization through intelligent management. In order to ensure the continuity and efficiency of communication services, the power system of telecommunications base stations needs to have high reliability, stability and high efficiency to meet various stringent environmental requirements. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end.

AC and DC Integrated Power System

Our company has developed an integrated design of distributed base station power supply system for a variety of installation environments such as corridor, shaft, and outdoor environment.

Communications System Power Supply Designs

Unique solutions for DSL, VoIP and 3G Base Stations illustrate the wide range of power system architectures and the opportunities available for higher level integration.
