

Can energy storage and photovoltaics be done together

Overview

Energy storage batteries integrate with photovoltaic systems by storing excess solar energy for later use, improving power reliability, enhancing self-consumption, and supporting backup power needs. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. Photovoltaics (PV) refers to the technology that converts sunlight directly into electricity using solar panels.
