

# Can photovoltaic panels be placed together

## Overview

---

The short answer is, yes, you can mix solar panels that have different wattages. Different wattage panels have different voltage and amps. We put solar panels together to increase the solar-generated power. Let's explore the key factors that will help you make the right choice. Solar panel system size is generally the main consideration. If you don't understand this, then you won't understand the reasoning behind it. But should you wire them in series, parallel, or a combination of both?

This guide explains the differences, when to use each method, and how to wire them safely.
