

# Can solar lights generate electricity in low light

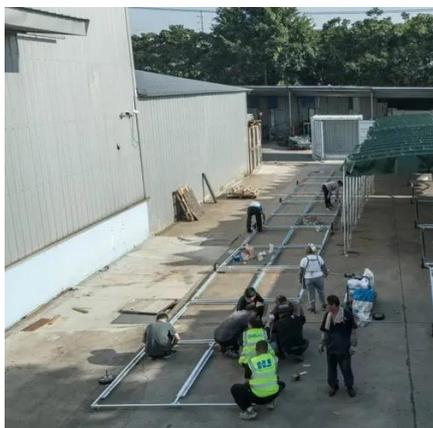

## Overview

---

The simple answer is yes, solar panels continue to generate electricity even in low-light conditions, but the amount and efficiency will vary depending on technology, angle, and ambient light conditions. Solar panels work by catching light particles (called photons) and turning them into electricity. Sure, they work best in bright sunshine, but they don't just shut off when clouds appear. High-efficiency panels can generate more power even under.
