

# Candle solar power generation

## Overview

---

Outdoor solar-powered candles operate on a relatively simple principle. Each candle comprises a solar panel, a rechargeable battery, and an LED light source. During daylight hours, the solar panel absorbs sunlight and converts it into electrical energy. Solar-powered, long-lasting, and flame-free, Luci Candle provides all the ambiance of a candle with none of the worry. Collapsible and waterproof, you can leave it out in the rain. These candles are powered by solar energy and are water-resistant. They drip-proof and environmentally friendly and are meant primarily for outdoor purposes. The purchase of Recycled Claim Standard (RCS) certified products demonstrates demand for recycled. The present invention relates to a self-powered generator using a candle and, more particularly, to a self-powered generator using a candle, the self-powered generator being capable of effectively transmitting the thermal energy of a candle to a power generation unit by providing a pair of fire.
