Power Amplifier: The RF signals are power amplified before transmission to their destinations for increased signal strength. Therefore, this is very important for enabling the signals to cover long distances and even penetrate barriers in the communication environment. Control Unit: The controller. Base station (or base radio station, BS) is – according to the International Telecommunication Union 's (ITU) Radio Regulations (RR) [1] – a " land station in the land mobile service. " A base station is called node B in 3G, eNB in LTE (4G), and gNB in 5G. The term is used in the context of mobile. It is a fixed location equipped with antennas and other equipment that receives and transmits radio signals to and from mobile devices, such as smartphones, tablets, and other wireless devices.
