

Electrochemical Energy Storage Materials and Systems

Overview

NLR is researching advanced electrochemical energy storage systems, including redox flow batteries and solid-state batteries. Electric vehicle applications require batteries with high energy density and fast-charging capabilities. Dear Colleagues, The challenge for sustainable energy development is building efficient energy storage technology. Electrochemical energy storage (EES) systems are considered to be one of the best choices for storing the electrical energy generated by renewable resources, such as wind, solar. The pursuit of high-energy-density batteries that tolerate extreme conditions and use earth-abundant elements is fundamentally constrained by the slow pace of materials innovation.
