

# Electromagnetic shielding of portable power supply

## Overview

---

This article reviews the top EMP protection devices and Faraday bags designed to shield portable and home generators, ensuring uninterrupted power supply. Protecting your generator from electromagnetic pulses (EMP) is essential for maintaining reliable power during emergencies such as solar flares, lightning strikes, or EMP attacks. These methods block harmful electromagnetic pulses. An EMP can originate from solar flares, nuclear explosions, or other sources. An electromagnetic pulse (EMP) can cause permanent or temporary damage to electrical devices and has no impact on living organisms. These antennas instantly catch a massive surge of power—far more than they can handle. This overload "fries" the delicate parts inside.
