

Finnish solar Site Energy

Overview

Read about solar power production, its costs and environmental effects and the project development of the solar power plant. Renewables Finland currently maintains three up-to-date lists and statistics that track the development of solar power in Finland. Solar power in Finland is contributing to the transition towards low-emission energy production. The total capacity increased by more than 300 MW over the year. Fingrid has estimated the installed capacity by using installation statistics published annually by Finnish Energy. Finland deployed 227 MW of utility-scale solar last year, according to figures from Renewables Finland cited in a report by pv magazine. The figure is a record for large-scale solar in a calendar year for Finland, taking the country's installed industrial-scale solar capacity to 352 MW.

Finnish solar Site Energy

Solar power

Solar power generation forecasts are based on weather forecasts, estimation of the total installed solar panel capacity and the estimated locations of the panels in Finland.

[Finland Solar Power 2025: Record Growth. Lapland's Largest Park](#)

Official data covering Finland's smaller-scale solar installations in 2025 is yet to be published. Last June, the Finnish Energy Authority said Finland's cumulative solar capacity reached ...

Finland solar panels: Impressive 2025 Trends Proven

The Finnish solar market is projected to maintain its robust growth trajectory. The government's ongoing commitment to renewable energy, coupled with continuous technological ...

Solar power projects in Finland

Read about solar power production, its costs and environmental effects and the project development of the solar power plant. Renewables Finland currently maintains three up-to-date lists and statistics ...

Finland adds 227 MW of utility-scale solar in 2025

Last June, the Finnish Energy Authority said Finland's cumulative solar capacity reached 1,247 MW by the end of 2024, with 1,124 MW coming from solar installations less than 1 MW in size.

Solar power in Finland

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated ...

Finland adds 227 MW of utility-scale solar in 2025

Official data covering Finland's smaller-scale solar installations in 2025 is yet to be published. Last June, the Finnish Energy Authority said Finland's cumulative solar capacity reached ...

ESS

[Solar power production capacity rose to](#)

1,000 megawatts

According to the preliminary data of the Energy Authority, at the end of 2023, Finland had approximately 1,000 MW of installed solar power production capacity, 936 MW of which was micro ...

Rapid growth of solar power in Finland could crash summer electricity

Solar power is a key part of Finland's and Europe's green transition. Yet its rapid expansion may bring unintended consequences: a new study shows that large-scale deployment of ...

Northern lights, solar sights: Finland's surprising solar surge

Thanks to its cool climate, abundant land, and solar radiation levels on par with northern Germany, Finland is unexpectedly well-suited to solar - especially when paired with wind, which peaks in winter ...
