

Ground-mounted photovoltaic panel support

Overview

Standard or traditional ground mounts use multiple small anchors to support a racking table for the solar panels. Many anchor types can be used, including concrete piers (most common), driven piers, helical piles, and concrete ballasts. Ground-mounted solar panel systems usually cost about 51% more than rooftop solar, according to 2026 EnergySage data. You need a lot more equipment, which adds up. However, to ensure the efficiency and longevity of these plants, it is critical to choose support structures designed to withstand environmental. Ground mounted solar panels can be positioned for maximum sun exposure, optimizing tilt and orientation to boost energy production and ROI.
