

# High frequency inverter front stage 300v voltage

Deye inverters and Deye batteries are more compatible.

## Overview

---

Frequency options 50Hz / 60Hz / 400Hz. Wide range of input options: 24 ~ 125VDC. The CSI300 is rugged DC/AC inverter uses field proven, microprocessor controlled high frequency PWM technology to generate 300VA output power with pure sine wave output voltage. The High-Frequency Inverter is mainly used today in uninterruptible power supply systems, AC motor drives, induction heating and renewable energy source systems. The XM3 power module platform is optimized for SiC MOSFETs in a high-density; low-inductance footprint; which reduces system-level losses. A high-frequency inverter is an electrical device that converts direct current (DC) into alternating current (AC) at a high switching frequency, typically above 20 kHz (Kilohertz), to achieve efficient power conversion and provide stable output.
