

Hospital energy storage project

Overview

A battery storage installation at Boston Medical Center demonstrates how hospitals can integrate energy storage into an efficiency or sustainability program to better manage peak demand and lower costly demand charges. The project is profiled in this case study by Clean Energy Group. Boston Medical. The battery system is expected to earn \$80,000 per year by providing energy to the local utility during peak summer demand periods, while saving \$57,000 per year by reducing the hospital's own monthly and annual peak consumption. Boston Medical Center Moakley Building Image: Drknchkn - Own work, CC. In almost 2000 German hospitals, supply systems are available - from CHP plants, chillers and in future also heat pumps to heat and cold storage tanks. Compared to other consumers (e. A key differentiator of Thermal Energy Storage (TES) is the ability to use off-peak power, when rates are lowest, and.
