

# How big a cable should a 110k solar inverter use

## Overview

---

If the distance between your inverter and the solar battery is between 0 and 15 feet, you can choose a 2AWG cable. For a 100 watt inverter a 16 AWG wire is suitable for 10ft or under. This is because you will draw a maximum of 100 watts at 12 volts which results in 8. A cable that is too thin can lead to significant power loss due to resistance, while a cable that is too thick may be unnecessarily expensive and difficult to. An Inverter Cable Size Calculator is a tool designed to determine the appropriate cable size for connecting an inverter to a power source and load. Use this table to decide what size battery-to-inverter cables and overcurrent devices (breakers and fuses) to use with your inverter.
