

How can we make solar energy generate electricity

Overview

Solar power generates electricity by using either solar thermal systems that convert sunlight into heat to produce steam that drives a generator, or photovoltaic systems, which transform sunlight into electricity through the photovoltaic effect. This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the. Photovoltaic (PV) technology, solar thermal systems, and concentrated solar power (CSP) are the primary methods deployed for capturing and utilizing solar energy. These sources have the potential to significantly reduce our reliance on fossil fuels and decrease greenhouse gas emissions. As with any other energy.
