

How do photovoltaic panels generate electricity on rainy days

Overview

Because solar panels rely on light, not heat, they can still generate power on cloudy or rainy days at a reduced capacity. On average, they produce 10% to 25% of their normal energy output under overcast conditions. It's important to note, however, that in areas with. Solar panels continue to generate electricity even when the sky is overcast and rain is falling, though performance is noticeably diminished compared to a bright, sunny day. Factors such as panel quality and system setup.
