

# How does Skyline generate solar power

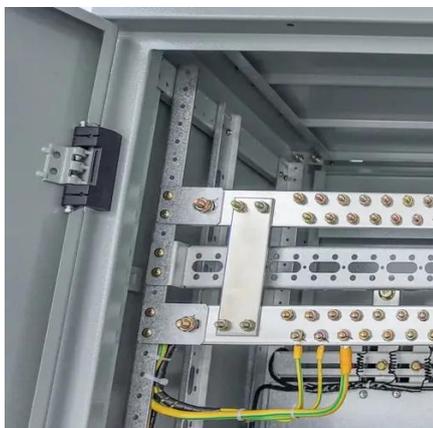

## Overview

---

Wave Power Plants, like the wind turbines, produce more power when placed in windy areas. Solar production varies with the daytime sunlight intensity, and therefore varies greatly with the weather. At night, output drops to 70% of the daytime value. Coal and Oil based power produces heavy ground. The solar power plant is a power-generating structure capable of generating 160 megawatts during the day and 112 megawatts during the night. The solar power plant produces electricity with its large solar panels and stores power in batteries built. They are typically the type of power plant that uses a huge boiler, so think coal, natural gas, or nuclear. I can't say it's terrible or catastrophic.
