

How long does it take to install 35 photovoltaic panels

Overview

Because between design, permitting, scheduling, installation, and final inspections, property owners can expect to wait 60-90 days, on average, before the panels can be switched on and their meters start spinning backward. How soon until those rooftop panels are soaking up the sunshine, feeding clean energy to your home, and slashing your power bills?

The good news is that installing the panels on your roof only takes a day or two. It's just every other part of the process—designing the system, securing permits. While panels may only be on your roof for a short time, the full process includes planning, design, permitting, inspections, and utility approvals — all of which are essential for safety and long-term performance. In 2026, most residential solar projects are completed within a few months, while. If you're thinking about installing solar panels, you probably have some questions about the process, especially: how long will it take?

The entire solar installation process usually takes around 6 months. Let's take a closer look at this process and provide you with a timeline, including a detailed description of each step. The installation of solar panels typically takes 1 to 3 days, but the entire process can take several weeks due to.
