

# How many purlins does a 2-meter photovoltaic panel have

## Overview

---

The basic formula is: Number of Purlins = (Length of Rafter/Roof Slope / Purlin Spacing) + 1. The addition of one purlin is necessary because the calculation determines the number of spaces, and an extra purlin is always needed for the starting or ending point. But here's the kicker - that changed to 42" after accounting for unexpected snow drift patterns. C - shaped Steel Purlin provides support for the solar panels, distributing the weight of the panels, wind loads, and snow loads evenly across the structure. The number of solar panels you need depends on the following factors: Photovoltaic solar panel system with a battery storage system; environmental. Several different U 9 construction numbers are available for.
