

# How many volts is the secondary of the high frequency inverter

## Overview

---

Most high frequency inverters generate 120V or 230V AC output, matching standard residential and commercial electrical systems. However, specialized models can range from 12V to 480V depending on application requirements. Here's a quick breakdown: In a 2023 solar installation project by EK SOLAR. The low frequency inverters typically operate at ~60 Hz frequency. These inverters use the pulse-width modification method: switching currents at high frequency, and for variable periods of time.
