

# How many years does it take to lease solar panels

## Overview

---

The typical solar lease lasts 20–25 years, but terms may vary between solar panel installation companies. For your house and you sign a contract to use the system. You don't buy the system or own anything installed on your property during the term of the contract, you're entitled to use all the power the system produces. You'll probably buy less power from your electricity. Lease agreements typically last 20-25 years and often include escalator clauses that increase monthly payments by 1-5% annually, while breaking the lease early can result in substantial termination fees and complications when selling your home. Cash purchases and solar loans provide better. After all, leased panels, which might initially seem like nothing more than “cool tech,” can make things tricky. For instance, if you plan to move or upgrade your vehicle in the near future, understanding the lease duration becomes even more critical.
