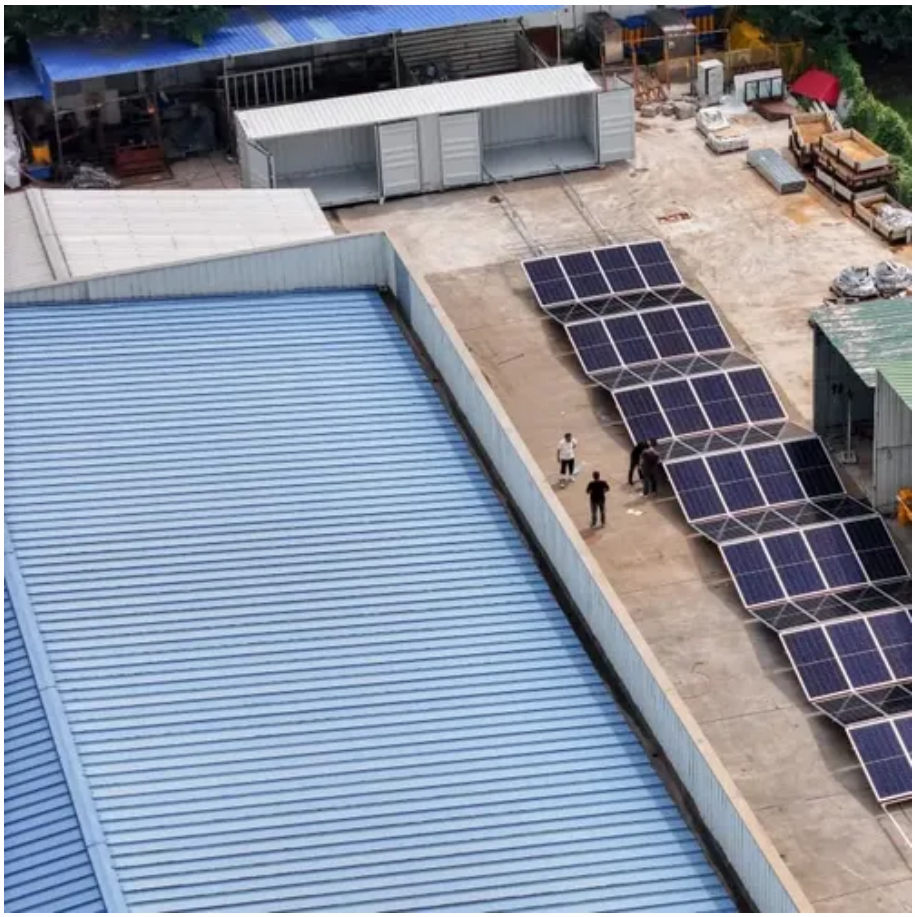
How to cool down the battery energy storage system of communication base stations



Overview

Here, we provide a comprehensive review on recent research on energy-saving technologies for cooling DCs and TBSs, covering free-cooling, liquid-cooling, two-phase cooling and thermal energy storage based cooling. Cooling systems must protect critical telecommunication cabinets, energy storage systems and back-up. Cooling systems must protect critical telecommunication cabinets, energy storage systems and back-up battery systems. Bulky compressor-based air conditioners have traditionally been used for removing heat generated by communications equipment installed in base station and cell tower enclosures.
