

How to install photovoltaic panels facing east and west

Overview

Should I install solar panels facing east and west instead of south?

They want to know if this approach saves money and energy. Many feel confused by conflicting advice from different solar companies. I wrote this guide to give you clear, practical answers. East-West Orientations Offer Strategic Value: While producing 75-85% of south-facing output, east and west-facing panels can provide superior financial returns by aligning with time-of-use electricity rates and matching typical household consumption patterns. Latitude-Based Angle Calculation. The answer is yes, with specific guidelines in mind. Here's how you can effectively and safely connect solar panel strings to a single Maximum Power Point Tracking (MPPT) inverter: Ensure that each string of panels has an identical number of panels. Studies show that south-facing solar panels can generate 20-30% more energy than east- or west-facing. When your two best options are east or west, which should you choose?

During the course of a day, the sun passes through the sky in an arc that varies throughout the year due to the earth's orbit (see top image).
