

# How to match the inverter when connecting solar panels to the grid

## Overview

---

Before connecting anything, match the solar panel specifications with the inverter voltage and inverter current. In fact, the inverter acts as the “brain” of your system—converting the DC electricity generated by solar panels into usable AC power for your home or business. String inverters (about \$0.30/watt) work best for unshaded roofs, while microinverters (about \$0.60/watt) are better for shaded roofs. Rapid Shutdown Compliance is Mandatory: 2025 NEC requirements. How does a solar inverter synchronize with the grid?

It matches voltage, frequency, and phase to the grid before safely transferring power. What Does a Solar Inverter Do?

How Many.
