

# Inverter solar Panel Relationship

## Overview

---

A solar inverter is a device that converts DC power from solar panels into AC power. It is a critical part of the system because homes and the electrical grid use AC. But if the DC input from your panels is too high, it can also. Let's break down exactly how to match your solar panels to an inverter, so you can design a setup that maximizes power without risking performance. The panels generate electricity from sunlight, while the inverter converts this direct current (DC) electricity into alternating current (AC) for use in homes and businesses.
