

Iran Uninterruptible Power Supply Plant

Overview

In November 2024, after demand for electricity during the summer caused frequent blackouts, a severe gas shortage caused the government to prepare to impose more blackouts on the population during the winter. By December 2024, Iranian government offices were operating only partially or were closed entirely, schools and colleges transitioned to online learning only, power to shopping malls and highways was cut off and due to reduced power supply industry almost halted. The result of the power shor.
