

Layoune new energy battery cabinet temperature is high

Overview

Elevated temperatures accelerate battery degradation, significantly shortening their operational lifespan and reducing their overall capacity. More critically, excessive heat poses a serious safety risk, potentially leading to thermal runaway—a dangerous and irreversible chemical. The optimal temperature range for most battery types, including lithium-ion, is between 20°C and 25°C (68°F to 77°F). What is the operating temperature of a battery?

The operating temperatures of batteries. Anyone installed their LiFePO₄ battery in a small Container and attaining acceptable temperature?

A lot of thanks to Mr Prowse and i ventured to the LiFePo₄ from lead acid batts. - did bottom balance then top balance. Did capacity test, i achieved 2200 watts hrs at 2.
