To enhance the accuracy of identifying power quality disturbances in microgrids, this paper introduces a Multi-level Global Convolutional Neural Network combined with a Simplified ...

[Multiple power quality disturbances analysis in photovoltaic integrated](#)

In this paper, an adaptive multiscale enhanced average combination morphological filter is proposed to analyze voltage signals captured at the point of common coupling of the photovoltaic ...

[The Optimal Model-Free Frequency Control for Multi-microgrid with](#)

In this case, the frequency control performance of the proposed control scheme was verified in the presence of random source load disturbances in two microgrids.

[Active Disturbance Rejection Control for Distributed Energy ...](#)

Motivated by the significant efforts developed by researchers and engineers to improve the economic and technical performance of microgrids (MGs), this paper proposes an Active ...

[Frequency control enhancement of an islanded microgrid using](#)

Load frequency control (LFC) is a major challenge for a microgrid (MG) system due to complex, nonlinear and uncertain behaviour of distributed energy resources (DERs) and fluctuating ...

[Multi-source coordinated frequency](#)

regulation method for LCC-VSC ...

Therefore, in response to this problem, a multi-source coordinated frequency regulation method is proposed in the LCC-VSC supplying microgrid system. Firstly, the initial action area which ...

Identification of multiple power quality disturbances in hybrid

To detect and classify the PQD problems in microgrid it is essential to first preprocess the voltage signals at a measurement point by an efficient signal processing technique to extract ...
