

My country s solar power generation leader

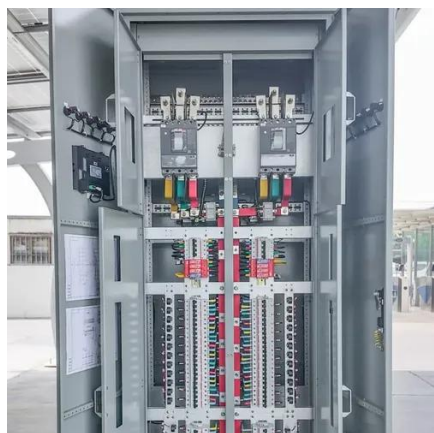

Overview

China remains the clear leader among the Top 10 Solar Energy Producing Countries, holding nearly 888 GW of installed solar capacity. Solar power is clean, green, inexpensive, and renewable energy that is produced when sunlight strikes human-made solar cells and is subsequently converted into electricity. The data can be further refined based on region, technology or year of interest. This was originally posted on our Voronoi app. Solar energy capacity is growing rapidly, driving the global transition to renewable energy. This graphic visualizes the top 15. More than one in five countries now get at least 10% of their electricity directly from the sun — and at least one has already reached the 25% mark, according to data collated by research group Ember.
