

Photovoltaic panel installation subsidy policy basis

Overview

Under most circumstances, subsidies provided by your utility to you to install a solar PV system are excluded from income taxes through an exemption in federal law. 7 When this is the case, the utility rebate for installing solar is subtracted from your system costs before you. The 30% federal solar tax credit, the single biggest financial incentive for homeowners installing solar, will officially end at the end of December. Any system installed after this year won't qualify for the discount that's helped millions of households cut thousands off their installation costs. 2 (Other types of renewable energy are also eligible for similar credits but are beyond the scope of this guidance.
