

Photovoltaic panels need to be cleaned after snowing

Overview

In most cases, you shouldn't need to clean snow off your solar panels. Light can get through the panels when there's a light dusting of snow, and when the snow is heavier, the 45-degree angles of most equipment should facilitate the snow sliding right off. But for a homeowner with solar panels, that beautiful blanket of snow can bring a flurry of questions and concerns. If your rooftop array is currently buried under a few inches of powder, you're likely wondering: Is this costing me money?

Do I need to get up there and clear it off?

And most. Do I need to remove snow from my solar panels?

And if so, what's the easiest way to do it?

The short answer: In most cases, you don't need to do anything at all. And when snow does become a problem, the easiest way to automatically remove snow on solar panels isn't a rake or a gadget; it's smart. While the efficiency of solar panels drops in winter, proper snow removal techniques can help keep this loss to a minimum. Heavy, wet snow can cover the modules long enough to block sunlight and push output close to zero until the panels clear. All you need to do is use a non-abrasive cloth.
