Overview

Short version: From 2024, it costs between \$2,800 and \$5,500 to ship a 20-foot container of solar panels around the world, depending on origin, destination, fuel prices, and demand. The 40-foot container, which is the one used for larger installations, ranges from \$4,500. At SCS Australia, we create solar powered shipping containers that combine renewable energy technology with the strength and mobility of a shipping container. Whether you're powering a remote worksite, an off-grid project, or a backup energy system, our containers are built tough for Australian conditions. These self-sufficient units are ideal for powering off-grid operations, mobile businesses, events, and remote projects—all while reducing. RPS supplies the shipping container, solar, inverter, GEL or LiFePo battery bank, panel mounting, fully framed windows, insulation, door, exterior + interior paint, flooring, overhead lighting, mini-split + more customizations! RPS can customize the Barebones and Move-In Ready options to any design. Whether you're a solar startup importing your first bulk order from Shenzhen or a do-it-yourselfer outfitting a container home in the Arizona desert, the cost of shipping solar panels in a container is more than just a line item — it can make or break your project budget. AVID's solar design, installation, commissioning and monitoring services are operated by our teams of skilled engineers and qualified electricians.

Our team of experts will work closely with you to understand your requirements, assess the container's location and available sunlight, and design a solar panel system that maximises energy production.

Understanding Solar Container Pricing in 2025

While container prices stabilized, the ripple effect continues. A standard 40HC container that cost \$3,500 pre-2023 now averages \$4,200 - and that's before adding solar components. Pro tip: Some ...
