

Principle of variable pitch battery cabinet base station

Overview

Think of a base station's energy storage system as a three-layer cake: 1. The Shape-Shifter (Power Conversion System) This electrical translator converts DC battery power to AC for equipment - like a multilingual diplomat for. Handles - provides an easy way to handle the battery cabinet. Battery holding brackets - they ensure the battery is always in a fixed position (no movement). Insulation system- insulation is also a safety. A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of technology that uses a group of in the grid to store. Battery storage is the fastest responding on, and it is used to stabilise those grids, as battery. The invention relates to the technical field of battery module assembly, in particular to an automatic assembly system for a variable-pitch battery module. In view of the. c change of communication flow is proposed.
