

# Signage and signage solar power generation

## Overview

---

These systems utilize photovoltaic (PV) cells, which convert sunlight into electricity, allowing digital signs to function independently from traditional power sources. By integrating renewable energy, solar-powered signage is ideal for outdoor environments with constant sunlight. One method gaining traction is integrating solar panels into signage. But is it feasible to integrate solar power into your sign?

What. Innovative solutions are transforming the landscape as sustainability takes centre stage in the signage industry. Solar-powered signage is emerging not only as a way to reduce energy consumption but also as a practical, forward-thinking alternative that simplifies installation and delivers. SEPCO's commercial solar lighting and power systems are the perfect solution for your sign projects.
