

Smart device and base station communication

Overview

LoRaWAN enables long-distance communication between low-power devices and strategically placed base stations. These base stations act as the bridge, receiving data from end-devices and transmitting it to network servers for processing. Sensors do not need to be paired to a specific Base Station. Instead, data is sent utilizing the strongest signal pathway, creating a modular and scalable solution for facilities. The Internet of Things (IoT) is growing rapidly, creating the need for strong, scalable, and energy-efficient communication systems. These types of objects are an inevitability since they serve the purpose of.
