

Solar cabinet system can convert dc to ac

Overview

By using a solar panel in conjunction with an inverter, you can effortlessly transform the direct current (DC) produced by the panels into alternating current (AC), which is compatible with most household appliances. The inverter processes the conversion, i., changing solar DC power into regular usable and consumable AC electricity. However, the process is not 100% efficient and energy is lost due to Resistance, heat, and the efficiency of the inverter.
