

# Solar energy and new energy generation direction

## Overview

---

Non-fossil energy sources composed 85% of new electricity generation capacity in 2022, with solar energy representing the single largest new source—56%. This continues and expands upon the trend of growing renewable energy expansions over recent years. Electricity generation by the U. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh. The. The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity — photovoltaics (PV) and concentrated solar power (CSP), sometimes called solar thermal) — in their current and plausible future forms. Because energy supply. Solar electricity is growing rapidly, but can it really dominate the global energy system?

Here is what it will take for us to power the planet on sunshine Is solar power going to take over the world?

The past few years have seen a frankly astounding acceleration in the rate of its deployment, with. In 2022, 38% of the world's electricity was delivered by carbon-free generation sources (nuclear, hydropower, and combined renewables), similar to 2021. The global electricity system is still mostly powered by fossil energy, but it is undergoing an increasingly rapid rate of change. Moreover, policy frameworks must adapt to encourage investments and research, pushing boundaries beyond conventional applications in. Comprehensive review of the potential role of solar in decarbonizing the electricity grid by 2035 and the energy system by 2050. Addresses other large trends and activities across the U.

## Solar energy and new energy generation direction

### [Executive summary - World Energy Investment 2025 - Analysis](#)

Executive summary Despite elevated geopolitical tensions and economic uncertainty, this tenth edition of the IEA's World Energy Investment shows that capital flows to the energy sector are set to rise in ...

### [At a Glance: How Renewable Energy Is Transforming the Global](#)

Non-fossil energy sources composed 85% of new electricity generation capacity in 2022, with solar energy representing the single largest new source--56%. This continues and expands ...

### [Solar energy is going to power the world much sooner than you think](#)

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine

### [Top 9 Solar Energy Trends & Innovations \(2025\) , StartUs Insights](#)

This data-driven research on 3050+ solar energy startups and scaleups highlights advancements in off-grid solar energy, decentralized solar power, photovoltaics, perovskite solar ...

## The momentum of the solar energy transition

We find that, due to technological trajectories set in motion by past policy, a global irreversible solar tipping point may have passed where solar energy gradually comes to dominate ...

## The Future of Solar Energy , MIT Energy Initiative

The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity -- photovoltaics (PV) and concentrated solar power (CSP), ...

## Solar Futures Study: Overview

Comprehensive review of the potential role of solar in decarbonizing the electricity grid by 2035 and the energy system by 2050. Addresses other large trends and activities across the U.S. economy that ...

[Solar power generation drives electricity](#)

## generation growth over the

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

## **Which direction should solar energy go? , NenPower**

Ultimately, the collective efforts of governments, industries, and communities will determine the direction solar energy takes, positioning it as a cornerstone of a sustainable future.

## Growth of Renewable Energy in the US , World Resources Institute

Renewables now dominate new power generation capacity, while new domestic clean energy manufacturing facilities are popping up around the nation. However, headwinds are also ...
