

# Solar irradiance of photovoltaic panels

## Overview

---

Solar irradiance refers to the power per unit area received from the Sun, measured in watts per square meter ( $W/m^2$ ). This measurement is crucial in understanding the energy available for conversion into electricity by photovoltaic (PV) systems. The term specifically denotes the electromagnetic. Solar irradiation varies dramatically by location: Desert regions like the Sahara and Atacama can receive over 2,800  $kWh/m^2/year$ , while northern European locations may only receive 800-1,200  $kWh/m^2/year$ . In simpler terms, it's how much solar power is shining down on a specific area at a given time.

## Solar irradiance of photovoltaic panels

### What is Solar Irradiance?

Solar irradiance comes in different forms because electromagnetic radiation from the Sun doesn't hit all surfaces uniformly. Every location on Earth receives sunlight, although in high latitudes, ...
