

# Solar panels parallel connection line

## GRADE A BATTERY

LiFePO<sub>4</sub> battery will not burn when overcharged, over discharged, overcurrent or short circuited and can withstand high temperatures without decomposition.

## Overview

---

How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box. This setup is common in 12V or 24V systems where you want to safely charge batteries or run low-voltage inverters. In this guide, we'll walk you through how. Solar panel system size is generally the main consideration. Once we've got that covered, I'll also explain the difference between these two configurations in Voltage (Volts) and Current (Amps) and provide a real-life example.
