

Solar photovoltaic panels connected to household electricity

Overview

These panels generate direct current (DC) electricity, which the home grid operates on as alternating current (AC). An inverter bridges this gap by converting DC into usable AC power. Net metering often links solar systems with the home grid, allowing energy flow in. Grid-tied systems dominate 2025 residential solar: With 90% of installations being grid-tied, these systems offer the best ROI at \$2.50 per watt, featuring 6-10 year payback periods and seamless utility integration through net metering agreements.
