

# Solar photovoltaic power generation does not use electricity

## Overview

---

Solar energy technology doesn't end with electricity generation by PV or CSP systems. Below, you can find resources and information on the. A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Sunlight is composed of photons, or particles of solar energy. What actually happens inside a panel?

Why does sunlight create usable power?

And how does that electricity end up running your lights. Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for domestic uses, to warm buildings, or heat fluids to drive electricity-generating turbines. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural.
