

Solar power back to the ground

Overview

As the name suggests, ground-mounted solar panels are mounted to the ground, rather than a roof. In most cases, it's easiest and most cost-effective to get a rooftop solar system. Ground-mounted solar panel systems usually cost about 51%. Grounding (also known as earthing) is the process of physically connecting the metallic and exposed parts of a device to the earth. It is a mandatory practice required by NEC and IEC codes to protect both equipment and personnel from damage and electric shock hazards. In this guide, we'll walk you through the ins and outs of solar. Much of the harnessed solar power that's part of the expansion of renewable energy in the US comes from big solar farms composed of rows and rows of solar panels on your home oriented to capture the most sun possible. They offer an excellent alternative for homeowners with unsuitable roofs or those wanting maximum energy production.
