

Solar power generation can be done without batteries

Overview

The short answer is yes: You can absolutely use solar panels without battery storage. In fact, the majority of residential solar installations in the U. are “grid-tied” systems without batteries (although solar + battery systems are becoming more and more common). Some hybrid inverters include a protected backup circuit or “critical loads” panel that can run when the grid is down— but only if you pair them with batteries or a special. Battery-less solar panel systems, also known as direct solar power systems, operate without the need for energy storage solutions like batteries. Read [Low-tech Magazine](#) offline.
