

# The big product of Jianghu is solar power generation

## Overview

---

Today, covering an area of 609 square kilometers, this solar power base boasts a power generation capacity of 8,430 megawatts, making it the largest in the world, according to Qeyang, deputy director of the administration committee of the Hainan prefectural green energy industry park. China is the world's largest energy consumer and greenhouse gas emitter - it is also undergoing one of the most ambitious energy transitions in history. Guided by its goals of peaking carbon emissions before 2030 and achieving carbon neutrality by 2060, the country is rapidly reshaping its power. Note: NEA considers utility-scale solar to include projects of at least six megawatts of installed alternating current capacity. China has more. XINING, June 9 (Xinhua) -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, simultaneously generating electricity while making exemplary contributions to poverty alleviation and ecological. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity - a staggering 64% jump compared to the same period in 2024, when 232 GW came online. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge. The country has invested heavily in solar technology, resulting in a remarkable increase in solar power generation. In 2023 alone, China added over 216 gigawatts (GW) of solar.

## The big product of Jianghu is solar power generation

### [China's solar sector blazes trail in commitment to renewables](#)

On the edge of the forbidding Tengger desert, the solar park produces 1.5 gigawatts of power -- but it has since been eclipsed and the largest is now further west with more than double the

### [H1 2025: China installs more solar than rest of the world combined](#)

China was responsible for installing a massive 256 GW of that solar capacity. For context, it took until September last year to pass the 350 GW mark. This year, the milestone was achieved in

### [Xinhua Headlines: Solar power farms on plateau fuel China's green](#)

Today, covering an area of 609 square kilometers, this solar power base boasts a power generation capacity of 8,430 megawatts, making it the largest in the world, according to Qeyang, deputy director ...

### [China's Solar power Surge Fuels Renewable Energy Future](#)

This moment, often referred to as the China Solar Power Surge, marks a significant shift not just in China's energy infrastructure but in the global pursuit of clean energy.

## [How China adds more renewable energy than any other economy](#)

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

## [State of global solar energy market: Overview, China's role, ...](#)

The panels are made of solar cells, which are used to convert the light coming from sunlight to electricity with the help of semiconductor minerals coated on their surface.

## [China's solar capacity installations grew rapidly in 2024](#)

Some of the largest projects under development are in the Inner Mongolia region in northern China. The Kubuqi Desert in Inner Mongolia is the planned site of the largest collection of ...
